Seamlessly *integrate* Expensify with NetSuite.

Cut through the clutter with Expensify's NetSuite expense management integration — a one-stop shop for streamlined expense reporting and financial management.

Scan the QR to see all the details of the Expensify's NetSuite integration.

Multi-subsidiary support
Integrate multiple entities into Expensify to bring in expense categories, departments, classes, locations, customers, projects, jobs, custom segments, records, and lists.

Natively support NetSuite Tax
Directly pull in all tax rates from each international NetSuite subsidiary and export the tax rates at the line item level for a true global solution for all NetSuite.

Auto-sync for realtime visibility
No need to provision two systems as Expensify's auto-sync updates any changes to your expense categories or other GL accounts immediately. Simultaneously, all final approved reports are exported back to NetSuite, removing manual admin overhead.

Auto-reconcile Expensify Card transactions
In one automatic sync, Expensify will create the liability account and Journal Entry to balance out the payment of your monthly transactions, saving admins hours reconciling their statements at the end of each month.

Direct corporate card integrations
Expensify has native integrations with all major corporate card providers which downloads transactions directly into user's accounts and automatically merges the transaction with receipt images that are submitted at the point of sale.
